Desktop Edition · Windows

Your Financial Doctor

Track · Research · Report

User Guide · Version 1.0

This is the Windows desktop edition of Portfolio Tracker — built for a fuller session at your own desk: wider screens, richer market data, and a few tools mobile doesn't have at all, alongside everything you already know from the phone app. This guide walks through every screen in the sidebar.

A typical session: check **Home** for today's numbers and market pulse → review or add holdings in **Portfolio** → look up any stock in **Research** before you act on it → check **Corp. Actions** or **IPO Watch** for anything relevant → export a polished report when it's time to share.

1. Welcome

What Portfolio Tracker does, and how it thinks about your numbers

Portfolio Tracker brings together holding-level tracking, free stock fundamentals research, live market context, and polished, client-ready reports in one app. Whether you're tracking your own money or managing several client portfolios, the goal is the same: numbers you can trust, and nothing that oversteps into advice.

Portfolio Tracker never issues Buy, Sell, Hold or Exit recommendations. Every figure and observation in the app describes the numbers you've entered or the data fetched — it never suggests a trade. Where the app doesn't have enough information to compute something reliably, it says so plainly (usually as “—”) instead of showing a number that might mislead you.

2. Getting Started

From a blank app to your first holding

On first launch you'll land on **Home** with an empty portfolio named “My Portfolio.” Add holdings by hand from the Portfolio tab, or import a spreadsheet in one go (Section 7).

Want to explore first without entering real data? Open **Settings** → **Load sample data** to fill the active portfolio with a few example holdings you can edit or clear at any time.

3. Navigating the App

A persistent sidebar — everything lives one click away

The left sidebar stays visible on every screen. Your active client's name sits at the top, under a gold “P” badge — click it any time to jump straight to the portfolio switcher.

Sidebar item	What it does
Home	Your active portfolio at a glance, plus live market context.
Portfolio	Every holding, plus performance analysis for the active portfolio.
Research	Free fundamentals for any NSE- or BSE-listed stock.

Sidebar item	What it does
Watchlist	Stocks you're keeping an eye on, separate from your holdings.
News	Real market headlines, separate from your own holdings.
Market Pulse	Most active stocks and 52-week highs/lows across NSE and BSE.
Corp. Actions	NSE announcements filtered to just the stocks you actually hold.
IPO Watch	Upcoming, open and recently listed IPOs.
Calculators	SIP, lumpsum growth, and CAGR/target planning tools.
Experts	Notes and market views published by your advisor (read-only).
Glossary	Plain-English definitions of the terms used throughout the app.
Settings	Fees, App Lock, the Research stock list, and data controls — pinned at the bottom.

Market Pulse, Corporate Actions, IPO Watch, News, Calculators and Glossary don't exist on the mobile app — they're desktop-only additions, built once the wider screen and richer session made room for them.

4. Home — your numbers at a glance

The first screen you see, and the busiest

Section	What it shows
Portfolio value	Your hero number, in gold, at the top of the page.
Tiles	Invested, Net P/L, Return %, CAGR, and Holdings count, in that order.
Markets	Ten live indices: Nifty 50, Sensex, Bank Nifty, Nifty Midcap 100, USD/INR, India VIX, Nifty Smallcap 100, Nifty IT, Nifty Pharma, and Nifty Auto.
Holdings Performance	A bar for every notable holding's P/L %, sized by magnitude, next to a colour donut of your allocation by value.

Section	What it shows
Market Movers (NSE)	Top gainers and losers across the whole exchange — not just your own holdings.
Market Status	Whether NSE is open right now, a countdown to close/open, and the next trading holiday.
On this day / Quote	A rotating market-history note and a line of investing wisdom.
Market News	The three most recent headlines, with a “See all news” link into the full News page.
CAGR only appears when it’s based on enough of your invested capital to be meaningful — see Section 6. Otherwise it shows “—” rather than a misleading number. Return % is a plain, non-annualised gain/loss figure, a different, complementary lens from CAGR.	

5. Portfolio — Holdings

Add, edit and track every position

Click **+ Add holding** or **Import .xlsx or .csv** (top-right) to add positions, or click any existing row to open it for editing.

Field	What it’s for
Symbol / Company name	Company name is optional — the symbol is used if left blank.
Quantity, Buy price, Current price	The core numbers behind every profit/loss figure.
Buy date (DD-MM-YYYY)	Powers CAGR and holding-period figures in Analysis.
Sell price / Sell date	Fill both in together to mark a holding as closed.
Target price	A private marker — flags with a target icon once reached. Not a signal.
Notes	Free text, for your own reference only.

Field	What it's for
-------	---------------

Dividends received	Log payments once the holding is saved; the total feeds Analysis.
---------------------------	---

Deleting is reserved for genuine mistakes — a duplicate entry, the wrong symbol. If you've actually sold a stock, fill in Sell price and Sell date instead: your numbers stay honest, and it correctly counts toward realized gains rather than disappearing.

6. Portfolio — Analysis

Understand performance, not just numbers

Card	What it shows
------	---------------

Gross / Net P&L	Net P/L = Gross P/L minus Fees. Click the Fees field to edit your charges.
----------------------------	--

CAGR (money-weighted)	Annualised return across dated, costed holdings. Hidden as “—” when fewer than half your invested capital has a known buy date.
------------------------------	---

Dividends & Yield on cost	Cumulative dividends as a share of capital invested (not annualised).
--------------------------------------	---

Hit rate	How many open holdings are currently in profit.
-----------------	---

Best & worst	Top and bottom holdings by total profit/loss percentage.
-------------------------	--

Fastest & slowest growers	Holdings ranked by their own CAGR — a different lens from raw % gain.
--------------------------------------	---

Realized gains by term	Sold positions split short-term / long-term at the 1-year mark.
-------------------------------	---

Concentration & Holding period	How top-heavy the portfolio is, and how long positions are held.
---	--

Allocation	A bar breakdown of current value by stock.
-------------------	--

Unlike mobile, the export buttons sit at the top right of the tab row, next to Holdings and Analysis — not at the bottom of the page. See Section 21 for what each report contains.

7. Importing from a Spreadsheet

Bring in a broker statement in two steps

Click **Import .xlsx or .csv** on the Holdings tab to open Windows' native file picker.

Step	What happens
1. Map columns	Symbol, Quantity, Buy Price and more are guessed automatically from your file's header row — correct anything with the dropdowns. The real header is found automatically even under a letterhead, and the right sheet is picked in a multi-sheet workbook.
2. Review	See how many rows are ready versus skipped, each with a plain-language reason, before anything is added.
Only Symbol and Quantity are strictly required. Broker statements rarely include your original buy price or date, so those import blank rather than being invented — fill them in later by editing the holding.	

8. Research

Free fundamentals for any NSE/BSE stock, held or not

Start typing a name or symbol for instant suggestions from an on-device stock list — no internet needed to search. Click **Add to Watchlist** on any result to save it; the button fills solid gold once it's on your list.

Section	What it shows
About	A short company description — shown first, before the numbers.
Snapshot	Price (delayed), day change, 52-week range, Market cap, P/E, ROE, Debt/equity, Dividend yield, P/B.
Analysis	A short, factual summary of the figures above.
Strengths & Points to watch	Threshold-based observations, each shown with its number — never a Buy/Sell/Hold call.
Compounded growth	3-year and 5-year annualised Sales and Profit growth.

Section	What it shows
Cash flow	Operating, Investing and Financing cash flow, two most recent fiscal years.
Management, Shareholding, Peers	Company reference data.
Corporate actions & Recent news	Dividends, splits, AGM dates, and recent headlines.
Research never shows a Buy, Sell, Hold or Exit call for any stock, by design — it's a fundamentals reference, not investment advice.	

Click **Export PDF** for a shareable one-page report on any stock.

9. Market Pulse

What the whole market is doing, not just your holdings

Tab	What it shows
Most Active	The highest-volume stocks today, toggled between NSE and BSE — a different lens from price movers, focused on trading interest.
52-Week High/Low	Stocks that just touched a fresh yearly high or low, shown for both exchanges together.
52-week data can come back empty while the market is closed — that's expected, not a fault, and the app says so plainly rather than showing a blank screen with no explanation.	

10. Corporate Actions

NSE announcements, filtered to what you actually hold

This page pulls a live feed of NSE corporate announcements — dividends, board meetings, results and more — and shows only the ones matching a company name in your current portfolio. Click any entry to open the original NSE announcement in your browser.

Matching quality depends on the company name stored against each holding. Holdings imported from a broker statement usually carry a full company name and match reliably; holdings added manually with just a ticker typed in may be missed. Fill in the company name field when adding a holding by hand for the most reliable matches here.

11. IPO Watch

Upcoming, open, and recently listed IPOs

Entries are grouped by status when the data supports it — typically Active, Closed, and Listed. Each card shows the key figures (lot size, price band, and more), with a “Show more” link for the full detail set. Where an official offer document is available, a document button opens the real filing in your browser.

IPO Watch is informational only, exactly like the rest of the app — it’s a reference for what’s happening, never a recommendation to apply.

12. Market News

Real headlines, separate from your own holdings

Home shows the three most recent headlines with a “See all news” link; the dedicated News page holds up to thirty. Click any headline to open the full article in your default browser.

Headline age can vary — this is sourced from a general news feed, and coverage isn’t always same-day for every story. Treat it as a useful pulse check, not a live news terminal.

13. Experts

Your advisor’s notes, always up to date

A read-only feed of notes and market views published by your advisor. Click **Refresh** to check for new notes — nothing here needs any setup.

14. Portfolios (Multiple Clients)

One app, as many portfolios as you manage

Click the client badge at the top of the sidebar to open the portfolio switcher.

Action	How
Switch portfolio	Click any portfolio in the list — the active one is marked.
Create a new one	Click + New portfolio, and give it a name.
Rename	Click the pencil icon on a portfolio.
Delete	Click the trash icon — permanently removes its holdings, dividends and fees, with confirmation. Your last remaining portfolio can't be deleted.
Each portfolio keeps its own holdings, dividends and fees. Watchlist and App Lock are shared across all of them.	

15. Watchlist

Keep an eye on a stock without holding it

Action	How
Add a stock	Search and click a suggestion.
Check a price	Each entry shows live price and day change; click Refresh prices to update.
Open fundamentals	Click an entry to jump straight into Research.
Remove	Click Remove on the entry.

16. Calculators

Quick planning tools, unconnected to any portfolio

Tab	What it does
SIP	Estimated maturity value and total wealth gained from a monthly investment.
Lumpsum Growth	Estimated maturity value of a one-time investment at a given return.

Tab	What it does
-----	--------------

CAGR & Target	Two modes: calculate a historical CAGR from two values, or work out the monthly SIP needed to reach a target amount.
--------------------------	--

Nothing entered here is saved — these are quick, standalone estimates, not tied to any holding or portfolio.

17. Glossary

Plain-English definitions, tied to what's actually in the app

A searchable reference for the terms used throughout Portfolio Tracker — P/E and ROE from Research, CAGR and XIRR from Analysis, SIP and Lumpsum from Calculators, and more. Type in the search box to filter.

18. Settings

Fees, App Lock, the Research stock list, and data controls

Setting	What it does
Active portfolio	Shows the current portfolio, with a shortcut to Manage portfolios.
Fees / charges	The amount deducted from Gross P/L for Net P/L, for this portfolio.
Research stock list	Shows how many stocks are available for search, and when last updated. Click Refresh after a new listing day — free, no quota used.
Security	The App Lock toggle, plus Change PIN once it's on — see Section 20.
Data	Load sample data (when empty) or Clear this portfolio (this portfolio only).
About	A link at the bottom of Settings — see Section 19.

19. About

Who's behind the app

Reachable via the link at the bottom of Settings — a short introduction to the app's creator, how to get in touch, and the note that Portfolio Tracker is not built or maintained by a SEBI Registered Analyst.

20. App Lock & Security

A PIN, checked once at launch

Step	What happens
Turn it on	Settings → Security → toggle App Lock, then set a PIN and confirm it.
Unlocking	Shown once, when the app first opens.
Change PIN	Settings → Security → Change PIN — verifies your current PIN before letting you set a new one.
Forgot PIN?	On the lock screen — turns App Lock off entirely so you can get back in. This never touches your portfolios or holdings, only the lock itself.
Turn it off	Toggle off in Settings and enter your current PIN to confirm.

Two real differences from the mobile app, worth knowing: the desktop edition is PIN-only, with no fingerprint option — and it checks the lock only once, when the app launches, not every time you switch windows. Opening a file picker or Save dialog never triggers it either way.

21. Reports — PDF & Excel

Client-ready, in two formats

Report	What's in it
Portfolio PDF (Analysis)	Client name & date, summary box, colour allocation chart, the same insights shown in the app, and a full holdings table — open and closed separately.
Portfolio Excel (Analysis)	The same figures as a spreadsheet: summary header block, then the full holdings table — ready for Excel or Google Sheets.
Stock PDF (Research)	A one-page fundamentals summary for a single stock, same branded header.

Every report closes the same way: the figures are informational only, and not investment advice or a recommendation to buy or sell. Exports use Windows' native Save dialog, so you choose exactly where each file goes.

22. Quick Answers

The questions we get asked most

Question	Answer
Why is CAGR showing “—”?	Fewer than half your invested capital has a known buy date. Add buy dates to more holdings to bring it back.
Can I manage more than one client?	Yes — see Portfolios (Section 14). Each keeps its own holdings, dividends and fees.
Does Research or IPO Watch recommend anything?	No. Both are reference tools — fundamentals and IPO details only, never a Buy/Sell/Hold call or a recommendation to apply.
Why don't I see anything in Corporate Actions?	Matching is by company name — holdings added manually with just a ticker (no company name filled in) may not match. See Section 10.
Is my data shared between portfolios?	No — holdings, dividends and fees are private to each portfolio. Watchlist and App Lock are shared.
Does exporting a report lock the app?	No — App Lock only checks once, at launch.
How do I see a stock I don't hold?	Search it in Research any time — no need to add it as a holding first.
I forgot my PIN — am I locked out?	No — use Forgot PIN on the lock screen. It turns off App Lock without touching any of your data. See Section 20.

23. Disclaimer & Contact

Portfolio Tracker is a personal portfolio-tracking and research tool. It is not built or maintained by a SEBI Registered Analyst, and nothing in the app — including Research, Market Pulse, IPO Watch, Corporate Actions, Analysis insights, or any generated report — constitutes investment advice or a recommendation to buy, sell or hold any security. Figures are based on the prices and dates you've entered, and on third-party market data (including NSE, Yahoo Finance, Google News, and indianapi.in) that may be delayed or occasionally unavailable. Please do your own research, or consult a qualified, registered advisor, before making investment decisions.
